Table of Contents

1. Summary 3
2. General Introduction 5
3. Study I: Is interhemispheric communication disturbed when the two hemispheres perform on separate tasks? 23
4. Study II: Why should one practice things rather with only one brain hemisphere? 57
5. Study III: Lost in transmission: the interhemispheric exchange of stimulus and context information 75
6. Study IV: Does the interhemispheric transfer change with task demands and attention? 99
7. Study V: The limitations of interhemispheric transmission may not affect all stimulus features equally 119
8. Study VI: The differences between right- and lefthemispheric object representations 139
9. Study VII: How do our brain hemispheres cooperate to avoid false memories? 162
10. General Discussion 184
11. References 204
12. Statement 227
