# Contents

1. **The Basal Ganglia** ..1
   1.1 Structural and functional neuroanatomy of the basal ganglia ..1
   1.2 The Basal ganglia and cognitive functions ..2

2. **Huntington’s disease: Clinical neurology** ..4
   2.1 Onset and early stages ..4
   2.2 Mid-course of disease ..5
   2.3 Advanced stages of disease and causes of death ..5
   2.4 Duration and progression of Huntington’s disease (HD) ..6

3. **Huntington’s disease: Genetics** ..7
   3.1 Heritance and epidemiology ..7
   3.2 The “Huntington-Gen” ..8
   3.2.1 The CAG-repeat and its correlates ..8

4. **Huntington’s disease: Neuropathology and Neurochemistry** ..10
   4.1 Macros- and Microscopic Pathology ..10
   4.2 Functional Neuroanatomy of the basal ganglia in HD ..11
   4.3 Neurochemistry in Huntington’s disease ..12
   4.4 Potentially pathogenic mechanisms ..13

5. **Huntington’s disease: Neuropsychology and Neuropsychiatry** ..15
   5.1 Cognitive functioning in HD ..15
   5.2 Neurocognition in course of disease ..16
   5.3 Neuropsychiatric aspects of disease ..17

6. **Huntington’s disease: Neuroimaging and Electrophysiology** ..18
   6.1 Structural and functional imaging in HD ..18
   6.2 Event-related potentials (ERP) in HD ..19
   6.3 The Error Negativity (Ne) ..22

7. **Deduction of hypothesis** ..24

8. **Paper I:** ..27
   “Error processing in Huntington’s Disease”

9. **Paper II:** ..43
   “Levels of error processing in Huntington’s Disease: a study using ERPs and voxel-based morphometry”

10. **Paper III:** ..65
    “Functional compensation or pathology in cortico-subcortical interactions in preclinical Huntington’s disease?”
11. General Discussion ................................................................. 86

11.1 Summary of main outcomes and implications ................ 86
11.2 The basal ganglia-ACC circuit: An ancient brain in the brain? 87
11.3 On the relation of genes and cognition ................................ 93
11.4 The assessment of structural-functional relationships .......... 97
11.5 On the nature of compensation in HD and neurodegeneration in general ................................................................. 102

12. Conclusion .............................................................................. 104

13. Literature ................................................................................ 105

14. Erklärung und Nachweis der Teilpublikationen .................... 127
