## Abstract

1 **Introduction** 4

1.1 LTP and LTD 5

1.2 LTP and LTD in humans 10

1.2.1 Repetitive transcranial magnetic stimulation (rTMS) 10

1.2.2 Paired associative stimulation (PAS) 14

1.2.3 Peripheral tactile and nerve stimulation 15

1.3 Focal hand dystonia 17

1.3.1 Lack of inhibition 17

1.3.2 Abnormal plasticity 19

1.3.3 Abnormal sensory function 20

1.3.4 Implications for experimental treatment therapies 23

1.4 Intention 24

1.4.1 Pharmacological modulation of coactivation induced non-associative tactile learning 24

1.4.2 Peripheral tactile and median nerve stimulation 26

1.4.3 Homeostatic plasticity within the somatosensory system 27

1.4.4 Peripheral tactile stimulation in focal hand dystonia 28

1.4.5 Sensorimotor integration in focal hand dystonia 29

2 **Material and methods** 31

2.1 Experimental procedures 32

2.1.1 Peripheral tactile stimulation protocols 32

2.1.2 Paired associative stimulation (PAS) 34
2.1.3 Tactile acuity measures .......................... 36
2.1.4 Haptic object recognition ....................... 38
2.1.5 Median nerve somatosensory evoked potentials (MN-
SSEPs) ........................................... 39

2.2 Experimental design ................................. 40
2.2.1 Pharmacological modulation of coactivation induced
non-associative tactile learning ..................... 40
2.2.2 Peripheral tactile and median nerve stimulation 44
2.2.3 Homeostatic plasticity within the somatosensory
system ............................................. 45
2.2.4 Peripheral tactile stimulation in focal hand dystonia 46
2.2.5 Sensorimotor integration in focal hand dystonia -
Short- and long-afferent inhibition during phasic
finger movement ................................. 49

3 Results ........................................... 54
3.1 Pharmacological modulation of coactivation induced non-
associative tactile learning ............................. 54
3.1.1 Dopaminergic gating of coactivation induced learning 54
3.1.2 Cholinergic gating of coactivation induced learning 56
3.2 Peripheral tactile and median nerve stimulation ......... 57
3.2.1 Effects of pHFS and pLFS applied to the right in-
dex finger on 2 point discrimination and cortical
excitability ....................................... 57
3.2.2 Effects of pHFS and pLFS applied to the right
median nerve on GOT thresholds and cortical ex-
citability ........................................ 59
3.2.3 The role of attention in pHFS induced improve-
ments of tactile acuity ............................. 60
3.3 Homeostatic plasticity within the somatosensory system 61
3.4 Peripheral tactile stimulation in focal hand dystonia ... 62
3.5 Sensorimotor integration in focal hand dystonia ....... 64
3.5.1 Short afferent inhibition (SAI) ................... 64
3.5.2 Long afferent inhibition (LAI) ................... 65
3.6 Summary of main results .......................... 84

4 Discussion .......................... 86
  4.1 Pharmacological modulation of coactivation induced non-associative tactile learning ................. 86
    4.1.1 Dopaminergic gating of coactivation induced learning 87
    4.1.2 Cholinergic gating of coactivation induced learning 91
  4.2 Peripheral tactile and median nerve stimulation ....... 93
    4.2.1 The artificial manipulation of input statistics ...... 93
    4.2.2 Permissive role of spatial summation ............. 95
    4.2.3 Excitability changes induced by pHFS and pLFS 96
    4.2.4 Role of attention in cortical plasticity and learning 97
  4.3 Homeostatic plasticity within the somatosensory cortex .... 99
    4.3.1 PAS in human somatosensory cortex ............ 99
    4.3.2 Interactions between PAS and pHFS applied to the median nerve .......................... 101
  4.4 Peripheral tactile stimulation in focal hand dystonia ... 105
  4.5 Sensorimotor integration in focal hand dystonia ....... 107
    4.5.1 Physiology of SAI .......................... 107
    4.5.2 Physiology of LAI .......................... 109
    4.5.3 SAI/LAI and surround inhibition .......................... 109
  4.6 Conclusion .......................... 111
