# Contents

1. **General Introduction** 7

   1.1 Cell migration 7
   1.2 Embryonic cell migration 7
   1.3 Cell migration during regeneration 9
   1.4 Somitogenesis 10
   1.5 Chemokines 13
   1.6 Chemokine receptors 14
   1.7 SDF-1 and CXCR4 14
   1.8 CXCR4/SDF-1 axis during development and disease 15
   1.9 The chicken embryo as model system for embryonic developmental studies 16
   1.10 The origin and formation of the pectoral girdle musculature 16

2. **The Aim of the study** 18

3. **Materials and Methods** 19

   3.1 **Materials** 19
      
      3.1.1 Chemicals 19
      3.1.2 Laboratory equipments 21
      3.1.3 Solutions and buffers 22

   3.2 **Methods** 25
      
      3.2.1 Chicken embryos 25
      3.2.2 Microsurgical manipulations 26
      3.2.3 Cell injections 26
      3.2.4 Bead implantation 26
      3.2.5 Electroporation 27
      3.2.6 Fixation and processing 28
      3.2.7 Processing for the vibratome sections 28
      3.2.8 Generation of the CXCR4 probe 28
      3.2.9 Construction of the SDF-1 transgene plasmid 28
      3.2.10 Cell transfections 29
      3.2.11 Tol2-EGFP construct 29
      3.2.12 Test for cell death 30
      3.2.13 Microscopy and imaging 30
      3.2.14 Protocol for In situ Hybridization on Whole mounts 30
      3.2.15 Protocol for In situ Hybridization on Paraffin sections (DIG) 31
      3.2.16 Protocol for Immunohistochemistry (IHC) on Paraffin sections 32
4. Results

4.1 Chemokine signalling and the migration of `non-resident limb-derived myogenic precursors` for pectoral girdle muscle formation

4.1.1 Introduction
4.1.2 Results
  4.1.2.1 SDF-1, CXCR4, Pax7 and MyoD expression in the shoulder region
  4.1.2.2 Tracing of pectoral girdle migrating myogenic precursors by using TOL2 system
  4.1.2.3 SDF-1-EGFP expressing cells affect the migration of pectoral girdle myogenic precursors
  4.1.2.4 CXCR4 inhibitor (T140/TN14003) affect the migration pectoral girdle myogenic precursors
  4.1.2.5 SDF-1-EGFP cells and CXCR4 inhibitors affect the formation of pectoral girdle muscle mass
  4.1.2.6 CXCR4 inhibitor T140/TN4003 do not cause cell death
  4.1.2.7 Mice deficient in the chemokine receptor CXCR4 (CXCR4\textsuperscript{−/−}) exhibit decrease in branchiomeric and shoulder girdle muscle formation
4.1.3 Discussion
4.1.4 Figures and Legends

4.2 Stromal-derived factor-1 (SDF-1) expression during early chicken development

4.2.1 Introduction
4.2.2 Results
4.2.3 Discussion
4.2.4 Figures and Legends

4.3 A novel role of CXCR4 and SDF-1 during migration of cloacal muscle precursors

4.3.1 Introduction
4.3.2 Results
  4.3.2.1 SDF-1, CXCR4, Pax7 and MyoD expression in the cloaca
  4.3.2.2 SDF-1-EGFP expressing cells affect the migration of cloacal myogenic precursors
  4.3.2.3 CXCR4 inhibitor (T140/TN14003) affects the migration of cloacal myogenic precursors
  4.3.2.4 SDF-1-EGFP cells and CXCR4 inhibitors affects the formation of cloacal muscle mass
  4.3.2.5 T140/TN4003 do not cause cell death
4.3.2.6 Cloacal muscle precursors are CXCR4 and Pax7 positive.
4.3.2.7 Ectopic application of COS-1-SDF1-EGFP cells in the chicken and mouse hind limb attract migrating cloacal myoblasts

4.3.3 Discussion
4.3.4 Figures and Legends

5. Combined discussion

6. Summary/Zusammenfassung
   6.1 Summary
   6.2 Zusammenfassung
