Contents

1. Introduction and main results 1
   1.1. Facts about monotone twist maps .......................... 1
   1.2. New results in this thesis ................................. 4
   1.3. The structure of this thesis .............................. 6
   1.4. Acknowledgments ........................................ 6

2. Examples of geodesic flows with vanishing topological entropy 7
   2.1. Completely integrable geodesic flows ...................... 8
   2.2. The Katok examples, proof of theorem III ............... 11

3. Tonelli Lagrangian systems 17
   3.1. Mather theory for Lagrangian systems .................... 21
   3.2. Fathi's weak KAM theory ................................ 23
   3.3. Minimizers in a fixed energy level ...................... 26

4. Global minimizers on the 2-torus 29
   4.1. Asymptotic directions of global minimizers ............... 29
   4.2. Irrational directions .................................. 34
   4.3. Rational directions .................................... 37
   4.4. Global minimizers and weak KAM solutions, proof of theorem II 38

5. Invariant tori and topological entropy 41
   5.1. Step 1: Invariant graphs in rational directions ........ 41
       5.1.1. Heteroclinic minimizers and the gap-condition .... 41
       5.1.2. Oscillating local minimizers, if the gap-condition holds .... 47
       5.1.3. The gap-condition implies positive topological entropy 55
   5.2. Step 2: Invariant graphs for all directions, proof of theorem I 56

6. Outlook 59

A. Convex Lagrangians with 3/2 degrees of freedom and Finsler metrics 61

Bibliography 65
